

L2 Validations -

- [Error 6870](#) (*a discipline incident is reported by a school, but a primary enrollment type does not exist for the student at that school*): Logic for this L2 has been revised to adjust for membership enrollment type, which is a type of primary enrollment. Membership enrollment type is only utilized by LEAs participating in the WisFip Pupil Count for Membership pilot program for the 2022-23 school year.
- [Error 6793](#) (*student must be at least three on enrollment start date*): Logic for this L2 has also been revised to not throw with the use of the membership enrollment type.
- [Warning 7445](#) (*section with student exists but staff association is missing*): In connection with the Export feature listed below in WDP updates, warning 7445 will indicate when students are associated with a course, but there is no staff member associated with that course.

WISE Webpage Updates -

The [Career Education: Info, Help and FAQ page](#) is live, and stands as an upgrade to the former CE Help page, but maintaining the existing URL (so if you bookmarked that page, it's still good!). Like the revisions made to the [Roster](#) webpage, Career Education: Info, Help and FAQs page has combined information from multiple pre-existing pages into a "one-stop-shop" webpage. The menu items at the top will jump you to sections quickly. We do strive to provide accurate, current, and thorough information on our website, but as always, the Customer Service Team is here to support you. Please fill out a [WISEsupport Ticket](#) whenever you need personalized help that hasn't been answered by information found online.

WISEdata Portal (WDP) Updates -

- **Tags Feature:** WDP has a handy feature, 'Tags', found in the Validations Messages tab. When you click the expander arrow "▶" to view details about a specific L2, you should notice a column header called Tags on the far right side. Also, when looking at the filters at the top of the page, above the list of L2s, along with familiar filters of School Year and School Type, there is also a new filter called Validation Message Tags. A drop down menu on this new filter allows you to see over a dozen available choices for tags.

A new addition is now available on the Tags feature. Users can enter a date onto a tag to enhance progress tracking when resolving L2s. Just hover over the selected tag to access the date feature. Once a date is associated with a tag, "aging" will display next to the L2 tag as a digit, indicating how many days the tag has been associated with the L2. For example, if you selected the 'Investigating' tag 9 days ago, the tag will now appear as: 'Investigating (9)'.

- **Vendor Info in Agency Contacts:** Under the Agency Contacts menu in WDP, alongside information about the LEA, contact information about all SIS vendors will also be

available. Through a dropdown menu, select all applicable vendors. Multiple vendors will be displayed, separated by commas.

- **SLIPA Code:** Student Language Instruction Program Association (SLIPA) information can be viewed in the Student Roster Details page, under the Language Instruction tab. Within that tab, in the field named Language Instruction Program Assessments, you can now view the ELP description and the numeric code associated with it (e.g., 1 - ELL/LEP Beginning Preproduction {WIDA label: Entering}).
- **SLIPA Export Upgrade:** The Student Language Instructional Program Export in WDP will be separated into three separate columns: Assessment Year, Monitored Status, and Proficiency Level. A corresponding LEP number will also be added to the proficiency level description (e.g., 2 - ELL/LEP Beginning Production {WIDA label: Beginning}). This data will be reported for all EL students with a monitored status.
- **Export Feature:** A new export is available, called Sections Missing Staff, associated with warning 7445 mentioned above. It combines Course Offerings with Staff Section Exports and includes records at the school level, including the number of students, and staff information associated with a course. The export displays records with sections connected to students but no staff, which will consequently make it much easier to locate staff who did not get pushed into WISE (most likely because they did not have a WISEid or a Local Person ID). Sections with zero students are not displayed to reduce the number of duplicated rows.
