

L2 Validations -

- [NEW! Warning 7445](#) will throw when there is a course/section that has student section associations which also does not have a staff section association, meaning that students have signed up for a course but there is no teacher associated with it. This warning will not go into production until September 19, 2022.
- [Warning 7122](#) is a World Language warning, which appears if there are no students in a school between grades K-6 associated with a World Language course (subject area code 24). The Warning itself remains unchanged, but the logic has been adjusted so that it does not throw for ICS and CDEB schools; this new logic is reflected in the KBA.

WISE Webpage Updates: Juvenile Detention Facility Schools -

Updated information has been posted on the [Uncommon WISEdata Scenarios page students for receiving off-site services in juvenile detention facilities](#). Updates include background information on Act 212, which gives districts the option to code such facilities as schools in the School Directory. There are instructions posted showing districts how to complete the process, along with information for such schools pertaining to WISEdata, WISEdash, and WISEstaff.

The [Migrant Status data element page](#) has updated information for LEAs about the data flow for obtaining migrant status data.

- LEAs must enter current school year enrollments into their SIS.
- These current enrollments then get pushed from the SIS to WISEdata & WISEdash nightly via the Ed-Fi API.
- MIS2000, the Wisconsin system of record for certificates of eligibility for migrant students, reads the submitted enrollment information from the WISEdash database.
- MIS2000 uses the enrollment data to determine which students hold migrant status.
- SIS vendors then upload the migrant status data which MIS2000 has obtained from WISEdata, based on the enrollment information they entered.
- The linchpin here is that if LEAs do not enter current enrollment information into the SIS to start the process, they will not be able to obtain any relevant data back from MIS2000 in regards to students with migrant status.
- Timely identification is important so that students can get appropriately serviced in support programs, such as free lunch, among others.
