WISEdata Release Notes 8/22/23

WISEdata and Ed-Fi Updates –

Final Stage of Testing API v6 in WDP

DPI has conducted one final "end to end" (E2E) testing scenario to ensure the V6 API upgrade is working correctly within WISEdata Portal for the 2023-24 school year. This type of testing simulates real-world data flow from the end user's perspective. All testing passed. We are go for launch!

Displaying Last ELP Code on Student Details Screen in WDP

When you look up an individual student in WISEdata Portal (WDP), their demographic data is visible on a specific Student Detail screen. We are adding a new item to this screen, which is the last reported ELP code. This information is imported into WDP, so LEAs will not have to enter it. This ELP Code will help LEAs resolve a number of errors and warnings associated with mismatched ELP Codes.

Ed-Fi Credential: Vendor Resources Bug Fix

There was a minor issue on the Vendor Resource page of WISEdata Portal. Vendors who wanted to add resources (slide decks, videos, other documentation) for their LEAs were not able to save their changes unless they added information into the 'description' field when the 'description' field is not required. This glitch was repaired, and resources can now be added and saved without needing to add information into the 'description' field.
