WISEid, WISEstaff Release Notes 7/19/23

WISEstaff:

[WISEstaff] Public Aggregate Staff Report Add Year

We have added a 'year' filter on the "Public Aggregate Staff Report - Subcontracted" within the Reports Menu on WISEstaff. This feature was missing on reports and downloads for the public staff report.

[WISEstaff] Archive Contracts and Assignments Job Not Working

For performance reasons, DPI only keeps three years of WISEstaff Contracts and Assignments in the system. This archive job is set to run every year. We discovered, however, that the archive function was broken, and the archive did not occur as expected. This resulted in WISEstaff performance issues because there were too many years of data in the system. This has been resolved.

WISEid:

[WISEid] Allow Duplicate Email in LEA if the Duplicate Has No Activity

We implemented a change to the "WISEid Uploads". On-screen edits and nightly student 'WISEdata to WISEid' data flow checks to prevents duplicate WISEid emails. Normally, if there was an identically matching email in a LEA , a validation would trigger. This new change to the "WISEid Uploads" screen now only triggers when:
- For Students - the conflicting WISEid email is a student in the current school year.
- For Staff - the conflicting WISEid email is a staff with assignments in the current and/or previous school years.

[WISEid] Add WISEid Tracking Page tab on Person Change History

For DPI Only: We have a new a 'WISEid Tracking Page' tab on the "Person Change History" screen in WISEid that allows DPI investigation into possible multi person WISEid issues. This new Tracking Page tab adds the ability for DPI to search by a person's name or WISEid.

[WISEid] Create Investigation of WISEid Tracking Page 3 of 3 basic search

For DPI Only: DPI's new, internal 'Tracking Page' tab also allows DPI investigation into possible multi-person WISEid issues. If there is an investigation involving a WISEid, a tab on the "Person Change History" screen, this tab will show this. The value added of this indicator is that, as DPI looks into potential problems with a WISEid, they can see the past history of findings about that specific WISEid.
