

**Release Notes for 4/10/2018 WISEid/WISEstaff
Production Release
(Core Apps Team Sprint 156 & 157 2-Week Work Cycles)**

| Feature Title | Notes |
|-----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WISEid: Upgraded the WISEid database server CPU capacity to avoid large district faults | We upgraded the WISEid database server CPU capacity to increase performance, which will prevent large district faults. |
| WISEid: Able to delete agency Local Person IDs without system timing out | We improved the system, so DPI can delete agencies' Local Person IDs by type without a timeout for large districts. |
| WISEid: Hotfix-- Fixed change request job issues, fixed missing person edit validations, and removed corrupt records | We fixed an issue where Change Requests were broken and generating multiple duplicate legal and other names. Additionally, we blocked the entry of partial names by upload. |
| WISEid: Hotfix-- Sample upload template file now accessible in production | On the Upload pages the file templates were broken for Person Upload formats. Now the sample upload template file is accessible. |
| WISEid: Able to update Parent Guardian Middle Name | We enhanced the system, so for each WISEid if the person has parent guardians of the same type, the record can be updated by later uploads so long as First and Last Name match. This enables middle name to be added but ignored if not present in the upload. Also, we did a data cleanup so that any of the parent guardians of the same type with the same first and last name no longer exist. If one name had |

|------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | middle name and the other didn't, we kept the name with the middle name. |
| WISEid: Modified significant Change Request Dependent Agencies | Previously, agencies other than DPI were being added to significant birthdate, mother parent records, or suffix change, but this was fixed. Only DPI should vote on these change requests to verify the change is not morphing one person into a new person record. |
| WISEstaff: Hotfix--96-0891 no longer removing valid K4, KG, PK grades when it shouldn't | In the Clear Non-required Data process, we were deleting for assignment 96-0891 for grades K4, KG, and PK when we shouldn't. We restored any data we had in previous uploads. Any further data will need to be restored manually. Logic to detect missing grades will be coming in the next release. |
| WISEstaff: Hotfix--Resolved issue with Public Reports All Staff Report License Type Filter Download | We had an issue in the Public All Staff Report where if you used a License Type filter when you went to Download the file, it wouldn't generate. This has been resolved. |
| WISEstaff: Hotfix--Sample contract and assignment upload template file now accessible in production | We fixed an issue where the template files on the Staff Upload page were not generating correctly. |
