

## WISEdata Release Notes: 2/27/18

<b>Title</b>	<b>Description/Comments</b>
<b>WDP:</b> Bug Fix--Modified logic for rule 6612	We modified the logic for rule 6612 regarding special education students who have an SDD reporting disability and turn 10. The logic will now use Effective Dates to ensure accurate flagging for students who can no longer use the SDD code.
<b>WDP:</b> Reevaluated L2 validations' criticality	We have reviewed and modified certain L2 validation rules to determine whether or not they should have a critical value, meaning it's essential to resolve the error for the data to flow into WISEdash. The correct criticality is associated to rules now.
<b>WDP:</b> Student Details screen now displays if a warning is Acknowledged.	Now when a warning has been acknowledged, it will display in the Student Details screen with a small 'Acknowledged' beside it to differentiate it from unacknowledged warnings.
<b>WDP:</b> Schools and School Type filters carry over to all screens.	We made updates in the WISEdata Portal to ensure any School or School Type filter selections carry over to each screen. This helps users with consistency and reduces confusion when viewing data.
<b>WDP:</b> Bug Fix--Resolved issue with Student Search	Previously we had a bug where when trying to search for a student in WISEdata, the system wouldn't return results when it should have. This has been resolved, and now Student Search will return appropriate results.

**Discipline:** Bug Fix--Incident and Discipline Dates display in correct format.

We had an issue where the Incident Date and Discipline Date were not displayed in 'mm/dd/yyyy' format in the Discipline Incident Export and Discipline Action Export, but we resolved the issue.
