

WISEdata Release Notes: 3/27/18

Title	Description/Comments
WDP: Bug Fix--Contact verification working	We had an occasional issue where certain contacts couldn't be verified in the WISEdata Portal, but this was resolved.
API: Student enrollments can't be deleted if other records are linked.	We modified the API, so the last student enrollment record (SSA) can't be deleted if dependent resources exist, meaning if other records are linked to it.
API: Other option removed from Gender	We have removed the Other, O, option for a Gender value. It will also be removed from the code table on the Gender data element page so as not to confuse users.
EdCred: Can pick vendor first in Agency view	In the Agency view in the Ed-Fi Credential tool, users can now pick the vendor first and then see the available claimsets for that vendor. This makes it easier for agencies to add vendor info.
WDP: Student Search can now use first letter(s) to search for name.	Based on a feedback request, we have made an enhancement to the Student Search in WISEdata Portal. Now users can type in the starting letter(s) of a first or last name to return search results.
WDP: Bug Fix-- Error message displays properly.	We fixed a bug where if there was no linked KBA to a validation message, the error number wouldn't display.
