WISEdata Release Notes: 4/24/18

Title	Description/Comments
API: Reviewed L1 Date Logic	We reviewed the date checks in the API, so L1 errors that look at specific dates will compare dates according to the date only. This will eliminate L1 errors where date is checked, but the minutes/seconds/milliseconds info caused errors.
WDP: Updates to Validation Message page	We updated the Validation Message page. ● Won't use filter by school year for Validation Run Status stat ● Removed *Number of Students Pending Imports* on Validation Message page ● Removed *Last Time Data Received From Vendor Tool* from Validation Message page
	*The bulk of development continues for work on the new WISEdata Portal Home Page and system changes for the 2018-19 school year.
